# COMMON RAIL DIESEL PUMPS

For Light and Medium Duty Commercial Vehicles

## Explore our technologies

# DFP6.2

DFP6.2 is a versatile and robust high pressure diesel common rail pump that can be remotely mounted on engine for light and medium duty commercial vehicle markets.

### Features

- Compact single plunger high pressure pump
- Fuel lubricated roller-shoe drivetrain.
- Capable to run with inward or outward thrust loads

### Design Features

- PHINIA patented low mass drivetrain with roller and shoe
- Optional mechanical transfer pump (positive displacement transfer pump for efficient low speed fuel transfer (cranking))
- Tapered shaft adaptable for gear, chain, belt or Oldham drive arrangement

### Performance

- High speed operation up to 2,200bar system pressure
- Proven robustness to worldwide fuels

### Benefits

- Proven production core pump design, in production since 2009
- Durable up to 8,000 hours
